

12ga, 16ga, & 20ga NobelSport-Vectan Shotshell Load Data

With three centuries of experience in making gunpowder, NobelSport combines tradition and modernity. Its strong research and development team designs the powders of the future.

Its site at Pont-de-Buis, recently remodeled and equipped with the most innovative manufacturing processes, can claim to be one of the leading industrial plants.

Boasting a new laboratory equipped with high tech analysis and testing resources, **NobelSport** supplies powders with even further improved ballistic performances, stability and reproducibility.

VECTAN POWDER - BEST USES

VECTAN Prima SV, Prima V, GM3

- Single Base granulated powders
- Intended for Shotshell applications

Prima SV.....Ideal for 12ga 7/8 oz High Velocity,
Low Pressure Target Loads

Prima V.....12ga 1 oz High Velocity Target
Loads

GM3.....12ga 1-1/8 oz Heavy Target or
Light Field Loads

VECTAN A24, AS, A1, A0

- Single Base flake powders with color identification
- Developed for handgun and some rifle applications; but excels in 12ga shotgun applications as well

A24.....12ga 7/8 oz Light Target Loads.
Red Flake

AS.....Best used in 12ga 1 oz Target
Loads; Green/Red Flake

A1.....12ga Heavy Target or Upland
Loads. Green Flake

A0.....12ga Field Loads. Optimal for
1-1/4 to 1-3/8 oz Green/Black Flake

VECTAN 206V, D20

- Single Base disc powders
- Intended for use in 12ga Target loads

206V.....High Velocity, Low Pressure 12ga
1 oz Target Loads.

D20.....12ga Heavy Target Loads

Ballistic Laboratory Notes:

- The "Load" column will often indicate a specific shot size. This is a laboratory notation that tells you what shot size was actually used in the loads for the ballistic lab tests. You are not confined by this information to use that specific shot size. This information is provided only as a guideline for shot-fit and (potential) filler wad purposes; it tells the loader what to expect.
- All unslit wads were slit prior to loading.** Number of slits may be varied to achieve desired effect. Slit 2 to 3 times for a tighter pattern and 5 or 6 for a more open pattern. Length of slits may also be altered. However, slits at least 3/4 the length of the wad are recommended for complete pellet release.
- Mica Wad Slick™ may be used in all loads prior to loading. Mica is a dry lubricant that eases insertion of wads into hulls, especially once-fired. Also provides a slight boost in velocity.
- Original Shot Buffer was used in lead loads. Mix #47 Buffer was used in steel shot and Hevi-Shot loads and BSB/ITX Buffer was used in ITX™ loads. Do not add buffer unless indicated by data.
- All powder charges listed in data are in grains and not grams. Buffer is listed in grains as well.
- Mylar™ wrap is coiled prior to inserting into the hull or shotcup. Cut Mylar™ wrap in half in instances where "1/2" is designated before the Mylar™ that is being used. Teflon™ wrap is also coiled and inserted into the hull prior to dropping the shot.
