

## Components Catalog

MAXAM Outdoors has been the world leader in the development, manufacturing and commercialization of sports ammunition and hunting powders since 1896.

More than 100 years of history guarantee our wide range of products. Millions of shooters and hunters all over the world count on an ammunition that is both high performing and completely trustworthy thanks to MAXAM Outdoors.

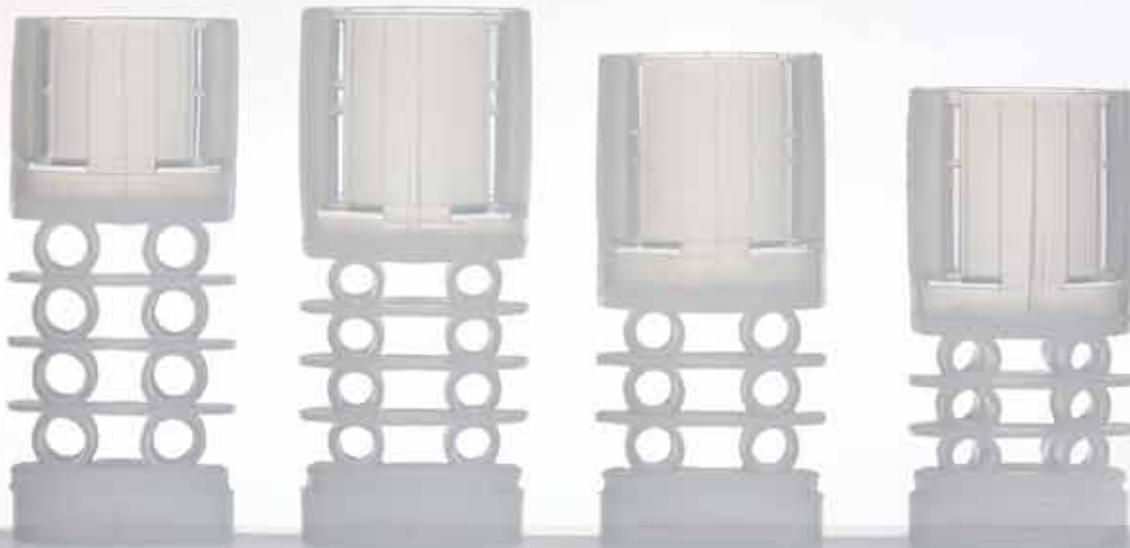

All our activity is ever respectful for the environment and nature. Our products come with a commitment to the conservation and preservation of the environment for future generations. MAXAM Outdoors is best placed in an activity in which wealth, growth and development are being generated in many areas throughout the world.

# Wads

MAXAM uses the best raw materials and an advanced treatment procedure to maintain perfect plasticity of its wads in order to obtain the best results in any shooting discipline achieving the following set of qualities:

- Softens recoil.
- Different shooting patterns spanning from the biggest spreads to high concentration levels.
- Ideal point of collapse.
- Guarantees sealing of gases for optimal compression rate.

MODEL	A28	A24	A21	A19

Packaging	4000	4000	4000	4000

# Shot

With its important experience, MAXAM Outdoors has developed, with the means of the highest technologies, production methods that guarantee the perfect uniformity and spherical shape of its shot in order to obtain the best ballistic results and patterns.

Extrahard 2.5	18-20 vickers
Magnum	> 22 vickers

# Primers

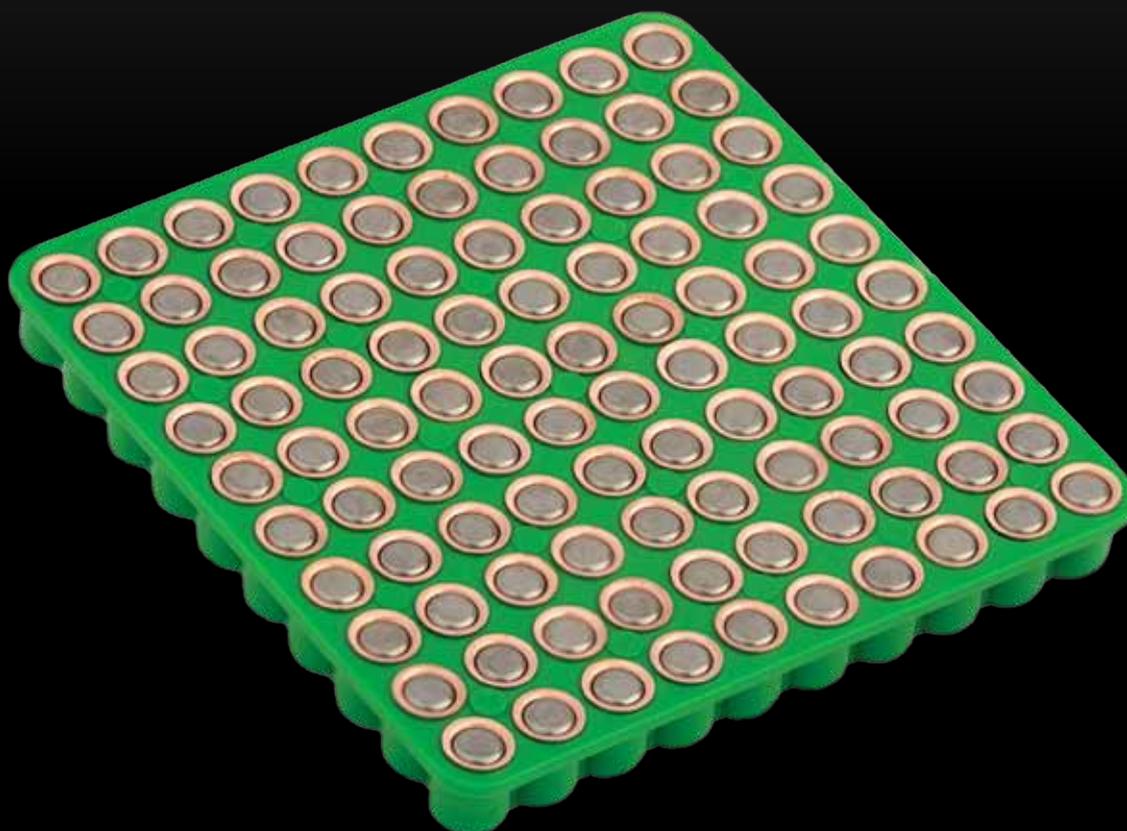

MAXAM Outdoors has devoted great efforts in the research and development of our 209 type primers.

At the outset, no primer in the market can compete in terms of consistency and sensitivity. This is the fruit of our continuous inspection of all components before and during the assembly process.

In continuation, the units coming off the production line are all subject to extensive inspections to ensure that the perfect quantities of explosive mixture are distributed as well as the faultless arrangement of all inner components. The finished product is then tested for sensitivity, power, temperature and pressure.

Furthermore, the composition of the explosive mixture has been fine tuned in our laboratories to perform optimally in various climatic conditions with many powders available on the market and without leaving residues after shooting.

Finally, our primers benefit from the highest homogeneity rates of the explosive mixture which results in a safer, more stable product and guarantees a fully proved regularity in the ignition of all primers.

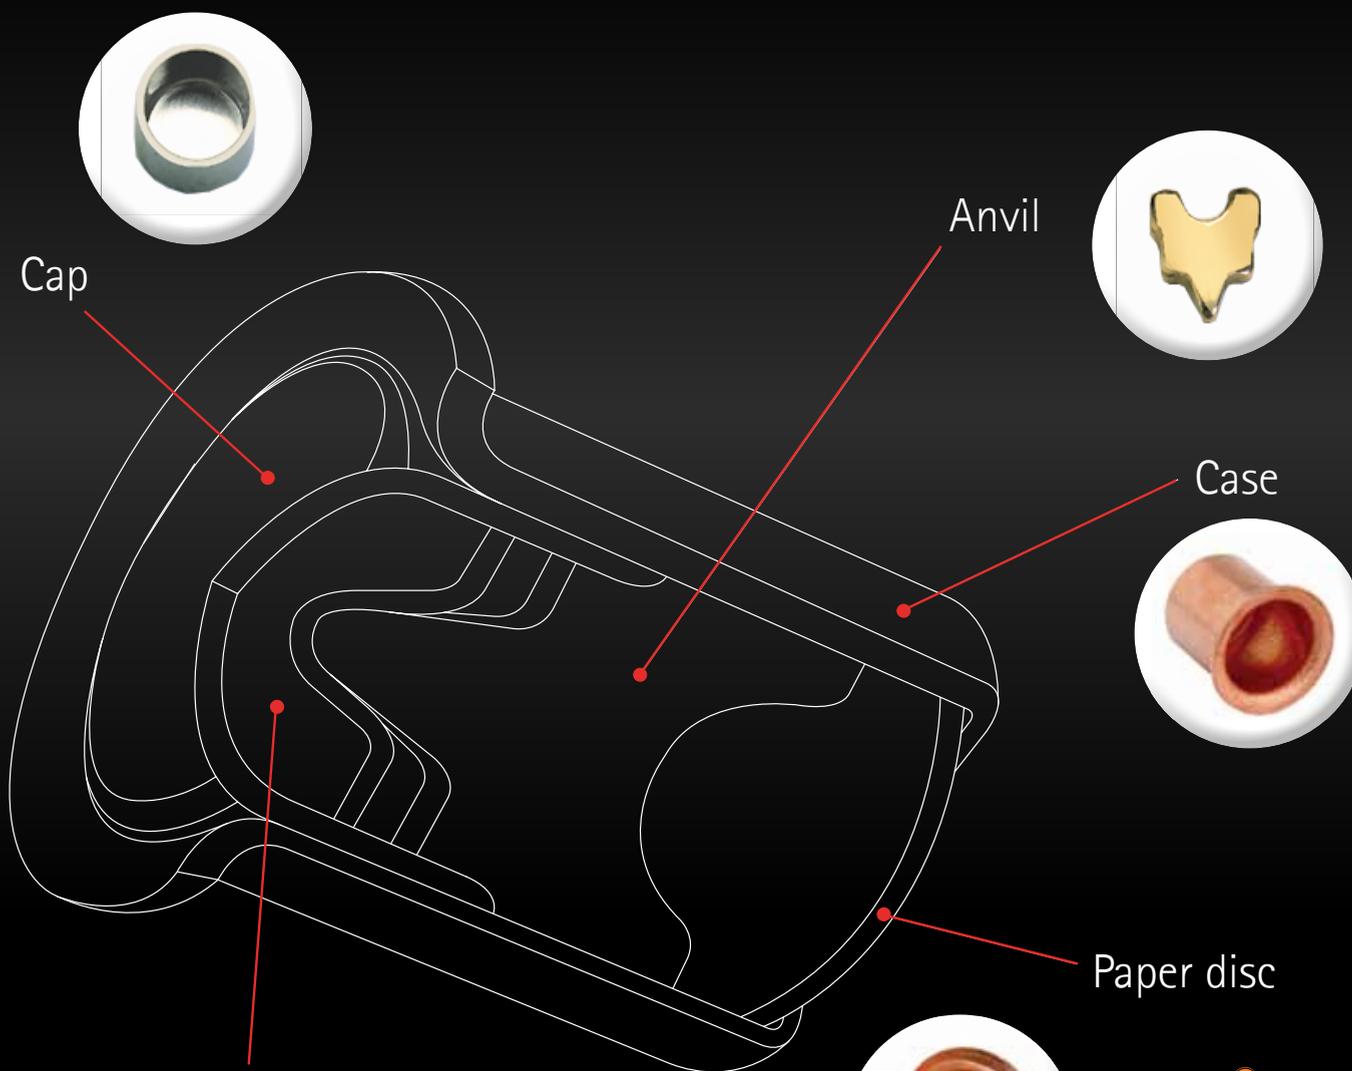

**Packaging**

Tray: 600 units

Box: 16.800 units

Pallet: 537.600 units

Explosive paste

# Shotshell Cases

MAXAM Outdoors shotshell cases conform to strict quality criteria to answer the most demanding needs of manufacturers and individual loaders. From the production of the plastic tube, to the primers, MAXAM Outdoors applies the most recent technologies to reach the highest levels of regularity in manufacturing. Each and every component is perfectly traceable, complying with the exacting criteria of international norms (SAAMI and CIP) and customers.

## General key points

Specially conceived primer receptacle to achieve a reinforced and regular positioning with high sensitivity in all types of firearms.

High precision milling and perfectly beveled top edge to guarantee regular and symmetric crimp closure of the cartridge.  
Exhaustive dimensional examinations of the tube for regularity and ease of loading.

Plastic tube manufactured from high density polyethylene which goes through a thermo mechanical and bi-directional (axial and radial) process.

Excellent elasticity of tube for sealing the cartridge while maintaining outstanding mechanical resistance.

- 100% of our primer units are tested for exact doses of explosive mixture and perfect positioning of inner components to obtain extreme levels of regularity.
- Primer explosive mixture with a high rate of compaction for increased security during manipulation.
- Chemical blend developed in house for an explosive mixture which delivers an optimal burn of many different powders without leaving residues.
- Unique protective membrane to avoid undesirable ignition of powder.

- Exceptional mechanical properties of the high density polyethylene base wad which contributes to the high resistance to separation of the tube and the base.
- Precise design of the base wad for a perfect assemblage of the shell.

- Brass head produced by the means of a progressive high precision stamping process resulting in a perfect chambering of the cartridge.
- Base head with extraordinary mechanical resistance able to endure high pressures and guaranteeing strength of the shell.
- Special chemical treatment to protect the head against corrosion and give a spectacular shiny finish.

MAXAM Outdoors prides itself in offering the best smokeless propellants on the market. Every batch of commercial powder is subjected to stringent quality control in order to verify physical, chemical and ballistic characteristics so that the expected speed and pressure are always obtained. Our powders are single-based propellant explosives manufactured from high nitrogen content nitrocellulose which has been properly gelled and stabilized.

The product range divides itself between CSB, PSB and SSB powders. Our traditional PSB and modern CSB powder ranges are characterized by their regularity and precision. The new SSB powder, a product developed specifically for cartridges containing steel shot, excels in the humidity and temperature conditions characteristic of waterfowl hunting.

## CSB Powder physical characteristics

**CSB 0**

Calibre	Primer	Projectile load (gr.)	Powder load (gr.)	Velocity (m/s)	Pressure (bar)
